● Notations:

- $\mathbb{R}$  = Set of real numbers.
- $\mathbb{Q}$  = Set of rational numbers
- $\mathbb{Z}$  = Set of integers.
- $\mathbb{N}$  = Set of natural numbers.
- $A^c$  = Complement of a set A.

● The set of natural numbers includes 0.

● Note: when you are doing calculation, consider a number upto its 2 decimal places. E.g. 1.2345 will be considered as 1.23

**Options :**

6406531184789. ✔ Useful Data has been mentioned above.

6406531184790. ✖ This data attachment is just for a reference & not for an evaluation.

Consider the tables 1 and 2 below consisting of mathematical statements / questions (Table 'Statement (S)') and answers (Table 'Answer (A)'). Answer the given subquestions based on the tables.

Statement No.	Statement (S)
S1	Three points in the coordinate plane will be collinear if the area of the triangle formed by the three points is zero
S2	Equation of a straight line passing through a point, which is at the intersection of two lines $\ell_1$ and $\ell_2$ , can be obtained by the algebraic sum of the equations of $\ell_1$ and $\ell_2$
S3	If two quadratic equations, which are given by $x^2 - 8x + 3k = 0$ and $x^2 - 12x + 7k = 0$ , where $k$ is real, have exactly one root in common, then what will be the value of $k$ ?
S4	Slope of a parabola at its vertex is always 0
S5	$(1, 2)$ is equidistant from the lines $x + y - 2 = 0$ and $7x - y = 0$

Table 1

Answer No.	Answer (A)
A1	True
A2	$k = 5$
A3	False
A4	$k = 3$

Table 2

Question Label : Multiple Choice Question

3 toys are kept on ground in such a way that their coordinates  $M(-2, 5)$ ,  $N(4, -2)$  and  $P(-3, 3)$  form  $\triangle MNP$ . Bimal moves the toys in a way such that all 3 sides of the triangle move 1 unit inwards to form  $\triangle QRS$ . Now consider three lines,  $l_1$  (the line which passes through the points  $S$  and  $Q$ ),  $l_2$  (passing through the points  $S$  and  $R$ ) and  $l_3$  (passing through the points  $Q$  and  $R$ ). Which of the following options give the equation of the line (among  $l_1$ ,  $l_2$ ,  $l_3$ ) that is at the maximum distance from the origin  $[(0,0)]$ ?

Figure 1: Here  $MN$  is parallel to  $QR$ ,  $PN$  is parallel to  $SR$  and  $MP$  is parallel to  $QS$ .

**Options :**

6406531184819. ✖  $3y + 5x - 7 = 0$

6406531184820. ✖  $7x + 6y - 16 = 0$

6406531184821. ✔  $y - 2x - 6.76 = 0$

6406531184822. ✖  $y - 2x - 9.5 = 0$

Question Label : Multiple Select Question

Consider Table 3 shown below consisting of research data relating two variables  $x$  and  $y$ . Use SSE method to fit a straight line mapping between the two variables of the form:  $y = mx + c$  where  $m, c$  are real constants. Consider the following three straight line fits:

Fit1:  $y = x + 2$

Fit2:  $y = 1.5x + 8$

Fit3:  $y = 0.6x + 8$

Which of the following options is/are correct ?

$x$	$y$
-2	5
-5	3
1	7
3	10

Table 3:

Options :

6406531184836. ✖ Fit1 has the lowest SSE

6406531184837. ✖ Fit2 is a better fit compared to Fit3

6406531184838. ✔ Fit3 is a better fit compared to Fit2

6406531184839. ✖ Fit1 is better than Fit2 and Fit3 is better than Fit1

6406531184840. ✔ Fit3 is the best fit

### Read the passage and answer the given subquestions

Chronic Traumatic Encephalopathy Concussions are brain injuries that occur when a person receives a blow to the head, face, or neck. Although most people who suffer a concussion experience initial bouts of dizziness, nausea, and drowsiness, these symptoms often disappear after a few days. The long-term effects of concussions, however, are less understood and far more severe. Recent studies suggest that people who suffer multiple concussions are at significant risk for developing chronic traumatic encephalopathy (CTE), a degenerative brain disorder that causes a variety of dangerous mental and emotional problems to arise weeks, months, or even years after the initial injury. These psychological problems can include depression, anxiety, memory loss, inability to concentrate, and aggression. In extreme cases, people suffering from CTE have even committed suicide or homicide. The majority of people who develop these issues are athletes who participate in popular high-impact sports, especially football. Although both new sports regulations and improvements in helmet technology can help protect players, the sports media and fans alike bear some of the responsibility for reducing the incidence of these devastating injuries. Improvements in diagnostic technology have provided substantial evidence to link severe—and often fatal—psychological disorders to the head injuries players receive while on the field. Recent autopsies performed on the brains of football players who have committed suicide have shown advanced cases of CTE in every single victim. In response to the growing understanding of this danger, the National Football League (NFL) has revised its safety regulations. Players who have suffered a head injury on the field must undergo a "concussion sideline assessment"—a series of mental and physical fitness tests—before being allowed back in the game. In an effort to diminish the amount of head and neck injuries on the field, NFL officials have begun enforcing stricter penalty calls for helmet-to-helmet contact, leading with the head, and hitting a defenceless player. Furthermore, as of 2010, if a player's helmet is accidentally wrenched from his head during play, the ball is immediately whistled dead. There is hope that these new regulations, coupled with advances in helmet design, will reduce the number of concussions player endure and thus curb the number of CTE cases. Efforts by the NFL and other professional sports leagues are certainly laudable; indeed, we should commend every attempt to protect the mental and physical health of players. However, new regulations at the professional level cannot protect amateur players, especially young people. Fatal cases of CTE have been reported in victims as young as 21. With appropriate equipment and form, tackling need not be dangerous. Proper tackling form—using the arms and shoulders to aim for a player's midsection rather than leading with the top of the head—should be taught at an early age. Youth, high school, and college leagues should also adopt safety rules even more stringent than the NFL's. Furthermore, at an early age, athletes should be educated about the serious dangers of head injuries. Perhaps the most important factor in reducing the number of traumatic brain injuries, however, lies not with the players, the coaches, or the administrators, but with the media and fans. Sports media producers have become accustomed to showcasing the most aggressive tackles and the most intense plays. NFL broadcasts often replay especially violent collisions, while the commentators marvel at the physical prowess of the players involved. Some sports programs even feature weekly countdowns of the hardest hits. When the media exalts such hazardous behavior, professionals are rewarded for injuring each other on the field, and amateurs become more likely to try to imitate their favorite NFL athletes. Announcers, commentators, television producers, and sportswriters should engage in a collective effort to cease glorifying brutal plays. In turn, fans should stop expecting their favorite players to put their lives on the line for the purposes of entertainment. Players must stop being encouraged to trade their careers, health, happiness, and their lives for the sake of a game.

Question Label : Comprehension

Fill in the blanks from the options given below in the given subquestions.

Australia's role 1. \_\_\_\_\_ (in/on/at/ from) the First World War, or the Great War as it was known 2. \_\_\_\_\_ (until/ untill/ unless/ for) 1939, is central to the development of modern Australia's vision of itself in the world. It has served to create what is in some ways a second founding of the nation in the Gallipoli campaign and on the battlefields of France and Belgium. The influence of the war experience in the First and Second World War 3. \_\_\_\_\_ (is/ are) evident in how ANZAC day is, perhaps even more than Australia day, the country's national day. When the war broke 4. \_\_\_\_\_ (into/out/on/up) in 1914, it was a certainty that, because of longstanding economic, family and defence ties, Australia, along with New Zealand, would stand alongside Britain. The 5. \_\_\_\_\_ (after/then/beforehand) Prime Minister Andrew Fisher was quick to pledge the country's support to "the last man, the last shilling". This was no idle promise, and Australia paid a high price for their loyalty to their colonizers.

Most of the ANZAC force was 6. \_\_\_\_\_ (send/sent) to Europe, but the Australian Light Horse remained to fight Turkish forces in Palestine and Syria. They 7. \_\_\_\_\_ (defeated/defended) the Suez Canal and advanced through Palestine and Syria. They also took part in what was one of the world's last great cavalry charges at Beersheba. The main ANZAC force arrived in Europe in 1916. The ANZAC experience was similar to that of the other participants in the war; a high death toll and little gain to be shown for it. Australian forces were present at all the major battles of the war and sustained some terrible casualties. For example, in 24 hours near Pozieres the 5th Division suffered 5,000 casualties. At the battle of Bullecourt, of the 3,000 men 8. \_\_\_\_\_ (who/whom) advanced, 2339 were killed, wounded or captured. By 1917 most of the officers were not professional soldiers. The most prominent example was General Sir John Monash, who was 9. \_\_\_\_\_ (a/ an) engineer by training. He 10. \_\_\_\_\_ (command/commands/commanded) the allied forces at the battle of Hamel so well that the general staff published the battle reports as a model.

At home, the war had a significant 11. \_\_\_\_\_ (affect/ effect) on the economy. Adverse effects included the end of British investment, the closure of many shipping lanes and the stockpiling of Australia's main export, wool. However, the isolation that resulted from the war meant that Australia had to make some things that had previously been imported. This led to the development of new industries. In addition, the BHP smelting company, which is now a 12. \_\_\_\_\_ (larger/major) Australian company, saw a great increase in demand for iron and steel. The needs of the war were a stimulus for the beginning of full industrialization in Australia. At the signing of the treaty of Versailles, 13. \_\_\_\_\_ (who/ which) marked the end of the war, Australia signed as a separate country. This reflected the fact that, at the cost of 60,000 dead, Australia had finally emerged 14. \_\_\_\_\_ (into/from) the shadow of Britain. The Great War was, perhaps, the 15. \_\_\_\_\_ (beginning/end) of modern Australian history.

Question Label : Multiple Select Question

The following pseudocode is executed using the "Olympics" dataset. **Count** represents the number of pairs of distinct players who won the same medal but not in the same sport. Assume that no player won more than one medal. Choose the correct code fragment to complete the pseudocode. It is a Multiple Select Question (MSQ).

```

Count = 0
while (Table 1 has more rows) {
    Read the first row X in Table 1
    Move X to Table 2
    while (Table 1 has more rows) {
        Read the first row Y in Table 1
        Move Y to Table 3
        *****
        *      Fill the code      *
        *****
    }
    Move all rows from Table 3 to Table 1
}

```

Options :

```

if (X.Medal == Y.Medal and X.Sport ≠ Y.Sport) {
    Count = Count + 1
}

```

6406531184959. ✖

```

if (X.Name ≠ Y.Name and X.Medal == Y.Medal and X.Sport ≠ Y.Sport) {
    Count = Count + 1
}

```

The following pseudocode is executed using the "Words" dataset.

```
CountA = 0, CountB = 0
while (Table 1 has more rows) {
    Read the first row X in Table 1
    i = X.LetterCount
    A = first letter of X.Word
    B = ith letter of X.Word
    if (A == B) {
        if (B is a vowel) {
            CountA = CountA + 1
        }
        CountB = CountB + 1
    }
    Move X to Table 2
}
```

Based on the above data, answer the given subquestions.

Consider various variables that describe the specifications of mobile phones in a store. These variables include the brands, internal storage (in GB), display size (in inches), price (in rupees), support (3G, 4G, 5G), and sim slots (single, dual). The specifications for different mobile phones are listed in a table. Based on the given information, choose the correct statement(s) from the following:

**Options :**

6406531185057. ✓ Display size (in inches), internal storage (in GB), and price (in rupees) are numerical variables.

6406531185058. ✖ Brands of mobile phones have the ordinal scale of measurement and internal storage (in GB) have the ratio scale of measurement.

6406531185059. ✓ Brands of mobile phones have the nominal scale of measurement and internal storage (in GB) have the ratio scale of measurement.

6406531185060. ✓ Support (3G, 4G, 5G), brands, sim slots (single, dual) are categorical variables.

If mean, median, and mode of a numerical variable is the same, then:

**Options :**

6406531185017. ✖ All observations must have the same value as mean.

6406531185018. ✖ The standard deviation of the numerical variable must be zero.

6406531185019. ✔ All observations need not have the same value as mean.

6406531185020. ✔ The standard deviation of the numerical variable need not be zero.

Question Label : Multiple Select Question

The tax paid by 100 employees of a company is given in a dataset. If the tax details of 200 more employees are added to the same dataset, then which among the following about the range will hold true? (More than one option could be correct)

**Options :**

6406531185061. ✔ The value of the range of the new dataset can never be smaller than the value of the range of the previous dataset.

6406531185062. ✖ The range of the new dataset can be smaller than the range of the previous

dataset.

6406531185063. ✖ The range of the new dataset will never exceed the range of the previous dataset.

6406531185064. ✖ There will always be some effect on the value of the range after adding the data of 200 more employees in the dataset.
