Let **timeList** be a list of pairs containing information about trains associated with a station **stn**.

Specifically, each element in this list is a pair: **[Arrival, Departure]** (pair of arrival and departure time). If the arrival or departure time is empty, it is represented as "None". What does **count** represent at the end of the execution of the following pseudocode?

```
1 count = 0
2 foreach x in timeList{
3     if(first(x) != "None" and last(x) != "None"){
4         count = count + 1
5     }
6 }
```

Options :

6406531164834. ❌ Number of trains for which **stn** is a starting station

6406531164835. ❌ Number of trains for which **stn** is an ending station

6406531164836. ❌ Number of trains for which **stn** is either a starting or an ending station

6406531164837. ✓ Number of trains for which **stn** is neither a starting nor an ending station

A word is said to be "Vowel Rich" if the word has at least three distinct vowels. Let **isRich** be a procedure that takes a row **X** from the "Words" table as input and returns True if the word in row **X** is a Vowel Rich otherwise returns False. Choose the correct code fragment to complete the procedure **isRich**.

```
1 Procedure isRich(X)
2     vDict = {}
3     i = 1, A = ''
4     while(i <= X.LetterCount){
5         A = ith letter in X.word
6         *****
7         ** Fill the code      **
8         ****
9         i = i + 1
10    }
11    if(length(keys(vDict)) >= 3){
12        return(True)
13    }
14    return(False)
15 End isRich
```

Options :

```
1 if(A is a vowel){
2     vDict[A] = True
3 }
```

6406531164838. ✓

```
1 if(A is a vowel){

Question Label : Multiple Choice Question

Two trains are called "Opposite Trains" if they stop at the same set of stations but in the reverse order. `isOpposite(N1, N2)` returns True if trains with train numbers **N1** and **N2** are "Opposite Trains" and False otherwise.

trains is a dictionary with train number as key mapped to a list of stations which that train runs through. For example, `trains = { 12281: ["Bhubaneswar", "Balasore", "Adra", "Varanasi", "Kanpur", "New Delhi"],.....}`. In this example, the train with train number 12281 starts from Bhubaneswar and reaches New Delhi via Balasore, Adra, Varanasi, and Kanpur in the given order.

Choose the correct code fragment to complete the procedure.

```
1 Procedure isOpposite(N1, N2)
2     L1 = trains[N1]
3     L2 = trains[N2]
4     if(length(L1) != length(L2)){
5         return(False)
6     }
7     *****
8     * Fill the code      *
9     *****
10    if(L1 == []){
11        return(True)
12    }
13    else{
14        return(False)
15    }
16
17 End isOpposite
```

Options :

```
1 while(L1 != [] and first(L1) == last(L2)){
2     L1 = rest(L1)
3     L2 = init(L2)
4 }
```

6406531164854. ✓

```
1 while(L2 != [] and first(L2) == last(L1)){

The following pseudocode is executed using the "Scores" dataset. At the end of the execution, **medalList** should store the list of sequence numbers of the students who have scored at least 200 total marks and have scored more than 80 at least in two subjects. Answer the given subquestions based on the pseudocode.

```
1 medalList = [], A = False, sCount = 0
2 while(Table 1 has more rows){
3     Read the first row X in Table 1
4     A = s200[X.seqNo]
5     sCount = nSub(X.SeqNo)
6     if(A and sCount >= 2){
7         medalList = medalList ++ [X.seqNo]
8     }
9     Move X to Table 2
10 }

Read the following passage and answer the given subquestions:

I was nine years old, sitting stiffly at the dining table in my blue-and-white school uniform, and across from me sat my mother, who had come home from work at the university registry, elegant in her swishy skirt, smelling of Poison perfume and saying she wanted to watch me eat. I still do not know who told her that I was skipping lunch before school. Perhaps it was the houseboy, Fide. Perhaps it was my little brother Kenechukwu, who went to school in the morning and came home just before I left. The firm set of her mouth told me that I had no choice but to eat the *garri* and soup placed on the table. I made the sign of the cross. I plucked a morsel from the soft lump of *garri*. I lightly moulded it with my fingers. I dipped it into the soup. I swallowed. My throat itched. I disliked all the variants of this quintessential Nigerian food, whether made from corn, cassava, or yams, whether cooked or stirred or pounded in a mortar until they became a soft mash. It was jokingly called “swallow,” because one swallowed the morsels without chewing; it was easy to tell that a person chewing *garri* was a foreigner.

“Hurry up,” my mother said. “You will be late for school.” We had *garri* for lunch every day except Sunday, when we had rice and stew and sometimes a lush salad that contained everything from baked beans to boiled eggs and was served with dollops of creamy dressing. The soups gave some variety to lunch: the yellowish *egusi*, made of ground melon seeds and vegetables; *onugbu*, rich with dark-green bitterleaf; *okro*, with its sticky sauce; *nsala*, with beef chunks floating in a thin herb-filled broth. I disliked them all.

That afternoon, it was *egusi* soup. My mother’s eyes were steady behind her glasses. “Are you playing with that food or eating it?” she asked. I said I was eating. Finally, I finished and said, “Mummy, thank you,” as all well-brought-up Igbo children were supposed to after a meal. I had just stepped outside the carpeted dining area and onto the polished concrete floor of the passage when my stomach churned and recoiled and the *garri* and soup rushed up my throat.

—Chimamanda Ngozi Adichie, *Real Food*

Correct Marks : 0

Question Label : Multiple Choice Question

Instructions:

- There are some questions which have functions with discrete valued domains (such as day, month, year etc). For simplicity, we treat them as continuous functions.
- For NAT type question, enter only one right answer even if you get multiple answers for that particular question.
- Notations:
 - \mathbb{R} = Set of real numbers
 - \mathbb{Q} = Set of rational numbers
 - \mathbb{Z} = Set of integers
 - \mathbb{N} = Set of natural numbers

Options :

6406531165018. ✓ Useful Data has been mentioned above

6406531165019. ✖ This data attachment is just for a reference & not for an evaluation.

Correct Marks : 5

Question Label : Multiple Select Question

Let $f(x) = e^{a(x^2 - 7x + 6)}$, $a \in \mathbb{R}$ then choose the set of correct options.

Options :

6406531165021. ✓ $f(x)$ will be positive for $x \in (-10, 5)$ if $a > 0$.

6406531165022. ✓ $f(x)$ will be positive for $x \in (5, 10)$ if $a < 0$.

6406531165023. ✖ $f(x)$ is a one-to-one (injective) function.

6406531165024. ✖ If $a = 1$, then $f(x)$ will have two X -intercepts.

Time : 0

Correct Marks : 6

Question Label : Multiple Select Question

Choose the correct options from the following.

Options :

There exist two convergent sequences $\{a_n\}$ and $\{b_n\}$ which converge to two different non-zero real numbers, but $\{a_n + b_n\}$ converges to 0.
6406531165031. ✓

The sequence $a_n = \begin{cases} \frac{1}{n} & \text{if } n \text{ is odd} \\ 1 & \text{if } n \text{ is even} \end{cases}$ is convergent.
6406531165032. ✗

A sequence $\{a_n\}$ which is not increasing cannot have an increasing subsequence
6406531165033. ✗

6406531165034. ✓ The sequence $a_n = n$ has no convergent subsequence.

Question Label : Multiple Select Question

Choose the correct options from the following.

Options :

6406531165025. ✓ There is no asymptote for the function $\log(x^2 - x + 5)$

6406531165026. ✓ $f(x) = \frac{1}{x^2 + 2}$ is a bounded function.

6406531165027. ✗ The inverse of $f(x) = x^2 - 4$ is $g(x) = \pm\sqrt{(x + 4)}$

6406531165028. ✓

The domain of the function $f(x) = \frac{3}{9-x^2} + \log(x^3 - x)$ is $(-1, 0) \cup (1, 3) \cup (3, \infty)$.

Question Number : 66 Question Id : 640653350988 Question Type : MSQ Is Question

Mandatory : No Calculator : None Response Time : N.A Think Time : N.A Minimum Instruction Time : 0

Correct Marks : 7

Question Label : Multiple Select Question

Choose the set of correct options.

Options :

6406531165037. ✘ The derivative of the function $f(x) = \sin(2 \cos 3x)$ is $f'(x) = 6 \sin(3x) \cos(2 \cos 3x)$.

6406531165038. ✓ If $h(x) = x^2 + \sin(\pi x) + e^x$ is the derivative of the function f then the value of $\lim_{m \rightarrow 0} \frac{f(2+m) - f(2)}{m}$ is $4 + e^2$.

6406531165039. ✓ The function $f(x) = \frac{x}{e^x}$ is differentiable on \mathbb{R} .

6406531165040. ✘ If product of two functions f and g is differentiable, then both f and g are differentiable.

Read the conversation between Mahesh and Isha and answer given subquestions:

Mahesh: Isha, a bunch of us are probably going to ditch the mess and go for pizza tonight. If you're free, you can meet us at the east gate at seven.

Isha: I'd love to Mahesh, but I have tuition classes tonight.

Mahesh: Tuition? I can't imagine you needing help with a class.

Isha: The tuition I'm talking about is tutoring I'm doing for someone else—though, now that you mention it, physics has been giving me more problems than usual this semester.

Mahesh: I find that hard to believe. Uh, so are you tutoring one of the juniors, or something?

Isha: Actually, no, I go out of campus to tutor a few students at the Perambur Government High

School.

Mahesh: High school kids? Wow. In maths or something?

Isha: Right. You've probably read about this in the paper, but the city's trying to raise the standards for its maths classes. The problem is, a lot of the kids are behind when they get to junior college.

Mahesh: So you help them catch up?

Isha: Basically. I have three students for forty-five minutes each on Wednesday night. So I'm there from 6:00 to 8:30 or so.

Mahesh: Isn't that late for kids to be still at school?

Isha: Well, they'd be doing homework at that hour if they were home, anyway. The thing is, most of the tutors are students here at the university, so our classes aren't over until late afternoon. And the education department likes us. We're good at what we do, but we volunteer, so the program doesn't cost a lot beyond, you know, the electricity to keep the high school open at night.

Mahesh: Can you afford to take that much time away from your own studying?

Isha: Some weeks it's kind of hard, but, I mean, when I start my PhD, I'm going to have to start teaching physics to students as a professor's assistant, anyway. I may as well get used to teaching with easier material and just one student at a time.

Mahesh: And it must be nice to help people.

Isha: Definitely. That goes without saying. Forty-five minutes a week isn't much time, but all three of my students have improved in the months we've worked together. It's really inspiring.

Mahesh: Cool.

Isha: So, anyway, sorry about dinner. It sounds like fun, and if it were any other night—

Mahesh: Hey, I understand. Have fun, and I guess I'll see you in class tomorrow morning.

In 2012, it was estimated that there were more than 100,000 Africans living in Guangzhou, but 1) _____ of them stayed for a very short time. According to official figures, 2) _____ 430,000 (plus or minus 1000) arrivals and exits by nationals from African countries were recorded at the city's checkpoints in the first nine months of 2014. Guangzhou officials released official population figures for residents in 2014 due to popular fears of an Ebola outbreak in the city by way of the African community. According to the city, there were 16,000 Africans including North Africans residing in Guangzhou. Of these residents, 3) _____ 4,000 (or twenty-five 4) _____) were long-term residents, which is defined by city officials as living for longer than 6 months in the city. A 2014 article in the magazine *This Is Africa* noted a decrease in population, blaming increased immigration enforcement and foreign exchange difficulties. A September 2016 CNN article on the community claimed that upwards to thousands of African residents had left the city, 5) _____ in the previous 18 months. From 2014, the African population significantly declined, dropping to 10,344 residents by February 2017.

Question Label : Multiple Select Question

An inner product on a vector space V is a function $\langle \cdot, \cdot \rangle : V \times V \rightarrow \mathbb{R}$ satisfying the following conditions:

Condition 1: $\langle v, v \rangle > 0$ for all $v \in V \setminus \{0\}$; $\langle v, v \rangle = 0$ if and only if $v = 0$.

Condition 2: $\langle v_1 + v_2, v_3 \rangle = \langle v_1, v_3 \rangle + \langle v_2, v_3 \rangle$.

Condition 3: $\langle v_1, v_2 \rangle = \langle v_2, v_1 \rangle$.

Condition 4: $\langle cv_1, v_2 \rangle = c\langle v_1, v_2 \rangle$

Let $V = \mathbb{R}^2$ and consider the function defined as:

$$\begin{aligned}\langle \cdot, \cdot \rangle : V \times V &\rightarrow \mathbb{R} \\ \langle (x_1, x_2), (y_1, y_2) \rangle &= x_1y_1 - x_1y_2 - x_2y_1 + x_2y_2.\end{aligned}$$

Which of the following are satisfied by the above function?

Options :

6406531165276. ❌ Condition 1 is satisfied.

6406531165277. ✓ Condition 2 is satisfied.

6406531165278. ✓ Condition 3 is satisfied.

6406531165279. ✓ Condition 4 is satisfied.

Question Label : Multiple Select Question

A norm on a vector space V is a function

$$\|\cdot\| : V \rightarrow \mathbb{R}$$

$$x \mapsto \|x\|$$

satisfying the following conditions:

Condition 1: $\|x + y\| \leq \|x\| + \|y\|$ for all $x, y \in V$.

Condition 2: $\|cx\| = |c|\|x\|$ for all $c \in \mathbb{R}$ and for all $x \in V$.

Condition 3: $\|x\| \geq 0$ for all $x \in V$; $\|x\|=0$ if and only if $x = 0$.

Consider a function $\|\cdot\| : \mathbb{R}^3 \rightarrow \mathbb{R}$ defined as

$$\|(x_1, x_2, x_3)\| = |x_1 + x_2 + x_3|$$

on the vector space \mathbb{R}^3 .

Which of the following are satisfied by the above function?

Options :

6406531165280. ✓ Condition 1 is satisfied.

6406531165281. ✓ Condition 2 is satisfied.

6406531165282. ✗ Condition 3 is satisfied.

6406531165283. ✗ None of these conditions are satisfied.

Question Numbers : (142 to 151)

Question Label : Comprehension

Suppose two publication houses (publication house A and publication house B) have organized a sale of their books. Both of them publish three types of books: novels, poetry collections and collections of short stories. The selling price (in (hundreds) ₹) of these three types of books in publication houses A and B are given as follows:

	Novels	Poetry collections	Collections of short stories
Publication house A	1	2	5
Publication house B	3	3	3

Table: Q2M2T1

The publication houses announced that in order to avail these special sale prices, customers have to buy equal number of novels, equal number of poetry collection, and equal number of collection of short stories from each of the publication houses (i.e., if a customer buys x number of novels, y number of poetry collections and z number of collection of short stories from Publication house A; then they have to buy exactly x number of novels, y number of poetry collections and z number of collection of short stories from Publication house B, to avail the benefit of the sale). So there is a map taking the tuple consisting of the number of books of each type bought (Novels, Poetry collections, Collection of short stories) to the prices paid by customers who availed the sale to each of the publication houses, which yields a linear transformation (T) from \mathbb{R}^3 to \mathbb{R}^2 (where the first and second co-ordinates of the image denotes the prices paid to publication house A and publication house B, respectively).

Answer the subquestions using the above information.

Discrete random variables:

Distribution	PMF ($f_X(k)$)	CDF ($F_X(x)$)	$E[X]$	$\text{Var}(X)$
Uniform(A) $A = \{a, a+1, \dots, b\}$	$\frac{1}{n}, \quad x = k$ $n = b - a + 1$ $k = a, a+1, \dots, b$	$\begin{cases} 0 & x < 0 \\ \frac{k-a+1}{n} & k \leq x < k+1 \\ & k = a, a+1, \dots, b-1, b \\ 1 & x \geq n \end{cases}$	$\frac{a+b}{2}$	$\frac{n^2-1}{12}$
Bernoulli(p)	$\begin{cases} p & x = 1 \\ 1-p & x = 0 \end{cases}$	$\begin{cases} 0 & x < 0 \\ 1-p & 0 \leq x < 1 \\ 1 & x \geq 1 \end{cases}$	p	$p(1-p)$
Binomial(n, p)	${}^n C_k p^k (1-p)^{n-k}, \quad k = 0, 1, \dots, n$	$\begin{cases} 0 & x < 0 \\ \sum_{i=0}^k {}^n C_i p^i (1-p)^{n-i} & k \leq x < k+1 \\ & k = 0, 1, \dots, n \\ 1 & x \geq n \end{cases}$	np	$np(1-p)$
Geometric(p)	$(1-p)^{k-1} p, \quad k = 1, \dots, \infty$	$\begin{cases} 0 & x < 0 \\ 1 - (1-p)^k & k \leq x < k+1 \\ & k = 1, \dots, \infty \end{cases}$	$\frac{1}{p}$	$\frac{1-p}{p^2}$
Poisson(λ)	$\frac{e^{-\lambda} \lambda^k}{k!}, \quad k = 0, 1, \dots, \infty$	$\begin{cases} 0 & x < 0 \\ e^{-\lambda} \sum_{i=0}^k \frac{\lambda^i}{i!} & k \leq x < k+1 \\ & k = 0, 1, \dots, \infty \end{cases}$	λ	λ

Continuous random variables:

Distribution	PDF ($f_X(k)$)	CDF ($F_X(x)$)	$E[X]$	$\text{Var}(X)$
Uniform $[a, b]$	$\frac{1}{b-a}, a \leq x \leq b$	$\begin{cases} 0 & x \leq a \\ \frac{x-a}{b-a} & a < x < b \\ 1 & x \geq b \end{cases}$	$\frac{a+b}{2}$	$\frac{(b-a)^2}{12}$
Exp(λ)	$\lambda e^{-\lambda x}, x > 0$	$\begin{cases} 0 & x \leq 0 \\ 1 - e^{-\lambda x} & x > 0 \end{cases}$	$\frac{1}{\lambda}$	$\frac{1}{\lambda^2}$
Normal(μ, σ^2)	$\frac{1}{\sigma\sqrt{2\pi}} \exp\left(\frac{-(x-\mu)^2}{2\sigma^2}\right),$ $-\infty < x < \infty$	No closed form	μ	σ^2
Gamma(α, β)	$\frac{\beta^\alpha}{\Gamma(\alpha)} x^{\alpha-1} e^{-\beta x}, x > 0$		$\frac{\alpha}{\beta}$	$\frac{\alpha}{\beta^2}$
Beta(α, β)	$\frac{\Gamma(\alpha+\beta)}{\Gamma(\alpha)\Gamma(\beta)} x^{\alpha-1} (1-x)^{\beta-1}$ $0 < x < 1$		$\frac{\alpha}{\alpha+\beta}$	$\frac{\alpha\beta}{(\alpha+\beta)^2(\alpha+\beta+1)}$

1. **Markov's inequality:** Let X be a discrete random variable taking non-negative values with a finite mean μ . Then,

$$P(X \geq c) \leq \frac{\mu}{c}$$

2. **Chebyshev's inequality:** Let X be a discrete random variable with a finite mean μ and a finite variance σ^2 . Then,

$$P(|X - \mu| \geq k\sigma) \leq \frac{1}{k^2}$$

3. **Weak Law of Large numbers:** Let $X_1, X_2, \dots, X_n \sim \text{iid } X$ with $E[X] = \mu, \text{Var}(X) = \sigma^2$.

Define sample mean $\bar{X} = \frac{X_1 + X_2 + \dots + X_n}{n}$. Then,

$$P(|\bar{X} - \mu| > \delta) \leq \frac{\sigma^2}{n\delta^2}$$

4. **Using CLT to approximate probability:** Let $X_1, X_2, \dots, X_n \sim \text{iid } X$ with $E[X] = \mu, \text{Var}(X) = \sigma^2$.

Define $Y = X_1 + X_2 + \dots + X_n$. Then,

$$\frac{Y - n\mu}{\sqrt{n}\sigma} \approx \text{Normal}(0, 1).$$
